Abanob Reda Eid Hanna

Network and Cloud Engineer

Address: El-Nozha, Cairo, Phone Number: 01022489178, Email Address:
abanobr915@gmail.com

Job Objective

Second-year Computer Science student at Nile University with a strong foundation in programming, algorithms, and network security, built through hands-on internships and a range of self-driven projects. Passionate about Artificial Intelligence, Cybersecurity, and emerging technologies. Seeking an internship or entry-level opportunity where I can apply my technical skills to real-world problems, contribute to impactful projects, and continue growing as an engineer.

PROFESSIONAL EXPERIENCE

Misr for Central Clearing, Depository and Registry (MCDR) (08/2025 – 09/2025)

Network & Network Security Intern

- Studied and applied core concepts of **Computer Networks and Network Security**.
- Explored network infrastructure design and applied fundamental security concepts to protect systems.
- Observed and assisted with how networks are managed and secured in a real-world organization.

Systics (08/2026 – 09/2026)

Network Intern

- Worked hands-on with **Network Switches**.
- Configured network switches to establish and maintain basic connectivity.
- Diagnosed and resolved basic connectivity issues through hands-on troubleshooting.

EDUCATION

- Nile University – Faculty of Computer Science
- Bachelor's Degree – Year 2
- October 2024 – Present

- GPA: 3.24

PROJECTS

Online Shopping System (Data Structures & Algorithms) (11/2025 – 12/2025)

- Designed and implemented an online shopping system using structured data models to manage products and transactions.
- Applied searching, sorting, and core data structure concepts to optimize system performance and efficiency.

Knapsack Problem (Python – Analysis of Algorithms) (04/2026 – 05/2026)

- Implemented a solution to the Knapsack Problem using dynamic programming techniques.
- Analyzed time and space complexity to identify and apply performance optimizations.

Supermarket Billing System (Java – OOP) (04/2026 – 05/2026)

- Built a supermarket billing system in Java, applying object-oriented design principles.
- Implemented core modules for inventory management, automated billing, and receipt generation.

Restaurant Management Application (Python) (11/2024 – 12/2024)

- Designed and built a Python-based restaurant management application with an intuitive interface for handling menu items, orders, and billing.

GPA Calculator (C++) (04/2025 – 05/2025)

- Built an object-oriented C++ application to calculate and track GPA, using CSV files for persistent data storage.

Line Follower Robot (Arduino) (04/2025 – 05/2025)

- Designed, built, and programmed an autonomous line-following robot using Arduino and infrared sensors.

Binary to Hexadecimal Decoder (Logic Design) (04/2026 – 05/2026)

- Designed a Binary-to-Hexadecimal Decoder using digital logic design.
- Applied Boolean algebra and combinational circuit design concepts.

SKILLS

- Programming: Python, C++, C, Java
- Networking: TCP/IP, Switching, VLAN
- Soft Skills: Problem Solving, Teamwork, Fast Learner, Communication, Time Management, Critical Thinking, and Adaptability
- Web: HTML, CSS, JavaScript
- Tools: Git, GitHub, VS Code, Arduino IDE

COURSES & ACTIVITIES

- Online Course: Web Development Basics (10/2024 – 12/2024), Introduction to Network (07/2024 – 08/2024)

LANGUAGES

- Arabic: Native
- English: Very Good
- German: A1 (Currently Learning)
